📍 Klang, Selangor, Malaysia

🐙 cool_walrus

PROFILE

Detail-oriented and driven cybersecurity student with a strong foundation in threat analysis, network security, and risk mitigation. Skilled in identifying vulnerabilities, implementing security protocols, and staying ahead of evolving cyber threats. Passionate about protecting systems and data through a proactive, analytical, and solutions- focused approach.

EDUCATION

2024 - Present

Sunway University, Selangor

Bachelors (Hons) in Network Security

- Expected to graduate **January 2027**

2023 - 2024

Sunway University, Selangor

Foundation in Arts (FIA)

- Graduated on **December 2023**

WORK EXPERIENCE

SEPT 2024 - PRESENT

Cre8IOT Sdn Bhd
Malaysia

Cybersecurity Junior Assistant - Part-time student

- Assited in network hardening such as logging, and audit trailling
- Ran Nmap scans against staging services and documented remediation steps before pilot rollouts

EXTRACURRICULAR ACTIVITIES

July 2025 - Present

Rotaract Sunway
University

Public Image Director

- Led club brand & public image, aligning comms with Rotary International visual identity across events and social channels; coordinated assets and approval workflows.

July 2024 - Present

Tedx Sunway University

Public Relations & IT Director

- Managed media relations end-to-end—press notes, outreach, and interviews—to promote speakers, themes, and event goals; secured sponsorships/coverage.
- Ensured cohesive messaging and strong brand alignment with TEDx global standards.

Feb 2024 - July 2024 Sunway Blockchain Club	PR Team Member Helped the club's branding and communication strategy to strengthen public perception and align with SBCC visual identity guidelines. Collaborated with internal teams and external partners to ensure visibility across all service projects and events.
Feb 2024 - Sep 2024 Sunway Cybersecurity Club	Assitant Event Director - Managed media relations, securing press coverage and interviews to promote speakers, themes, and event goals. - Led a team of communications and media volunteers, ensuring cohesive messaging and strong brand alignment with TEDx global standards.

PROJECTS

2025 Personal Project (Ongoing)	VERO Online Ticketing Platform with Blockchain Smart Contract - Built a FastAPI backend with JWT auth and simple RBAC - Implemented event creation, ticket purchase, and QR-based entry with single-use, expiring tokens and server-side validation. - Added a user-to-user resale flow: sellers list tickets at a fixed +20% markup, buyers purchase, and ownership transfers with full audit trail. - Enforced state machine for tickets to prevent reuse and block entry for listed/sold tickets. - Integrated payments and wrote webhook handling to finalize transfers only after confirmed payment. - Applied security basics: bcrypt password hashing and salting, CORS/secure headers, rate limiting, and role-scoped endpoints. Stack: Nuxtjs, Postgresql, JWT, Bcrypt, Fast API,
2025 Personal Project	License Plate Recognition System - JWT auth with hashed and salted passwords - Simple RBAC (admin/resident,guards) enforced on API routes. - Secured Backend database API routes - Developed Custom Login Authentication Server for better customization - Protected endpoints with role-checks and CORS header with basic rate limiting - Wrote clear setup docs and Dockerized the services for easy run/deploy. Stack: Sveltekit, SkeletonUI, Postgresql, Docker, JWT, SHA-256, GIT, Amazon EC2, FastAPI, Nginx

2025
Sunway University

Linux Lan Infrastructure Project

- Configure Web Server for a simulated LAN environment supporting DHCP, DNS, wireless access point using BIND9 on RaspiOS in Raspberry PI 5
- Applied NAT and basic firewall rules for secure internet access; documented setup and troubleshooting steps for repeatable deployment.
- **Stack: Raspios, BIND9, ISC-DHCP, Apache, hostapd, UFW, Bash** for custom scripting and for routine services.

2025
Personal Project

AI Stock Market Analysis

- Developed an AI model to analyze stock market trends using Neural Processing Units (NPUs) for real-time data processing and on-edge processing.
- Utilized machine learning algorithms to identify patterns and forecast stock movements based on historical and live market data.
- Focused on performance optimization and hardware acceleration by leveraging NPU capabilities for efficient inference tasks.
- **Stack: Alpha Vantage API, Numpy, Scikit-learn, Python, Fast API, OpenVINO**

2024
Sunway University

Restaurant Management System

- Built a lightweight Restaurant Management system to manage food orders, order management, and admin-side access.
- Designed an intuitive command-line Interface and integrated on-edge data processing to enable real-time tracking without requiring an internet connection.

SKILLS

- Proficient in English, Bahasa Malaysia, Tamil Developed web-scraping frameworks, data-parsing
- pipelines, and API integrations using libraries such as Moomoo OpenD, OpenAI, DeepSeek, and Google Gemini APIs. Familiar with scripting & automation with Python (requests, asyncio), Bash; CI/CD pipelines.
- Familiar with network configuration task including Nginx, Postgresql, NIST Cybersecurity Framework, and firewall rules, load balancing, SSL/TLS setup. End-to-end delivery—requirements gathering, sprint planning, development, QA, deployment. Clear technical write-ups; slide decks for stakeholders at all levels.
- Communicates effectively in group settings ensuring alignment during technical troubleshooting and presentation delivery
